

VIII. Mini Project-Smart Healthcare Analytics

AIM

To clean, process, and visualize patient, disease, treatment, and hospital-cost data using Python, and build static visualizations and interactive dashboards using Python, Power BI, and Tableau to derive meaningful healthcare insights.

DOMAIN

Healthcare Analytics

PROBLEM STATEMENT

Healthcare datasets contain patient demographics, diseases, treatment costs, hospital stay duration, and department information. There is a need for a data-driven visualization system to analyze treatment costs, patient distribution, department-wise workload, and hospital stay patterns for meaningful healthcare insights.

OUTPUT

Python:

PowerBI:

Tableau:

RESULT

Thus, the Smart Healthcare Analytics mini project was designed and the given program was written and executed successfully using Python, Power BI, and Tableau.
